

# CONTRACTOR TRAINING

## Through-Wall Flashings & Transitions

### 2026 Training Session

This session will focus on the best practices for installing different types of flashings. By adhering to these guidelines and ensuring the correct installation of the through-wall flashing system, you can effectively mitigate the risk of unwanted moisture penetration.

The training can be scheduled at any time that suits your team and can be customized to meet your specific needs.

It will take place either at your facility or on a job site and can include a classroom session, a hands-on portion, or a combination of both

York Flashings will provide food for attendees during the training session.

Schedule a training session today!

### Learning Objectives

- Discuss attributes of commonly specified flashings.
- Understand the installation process of various flashing systems. Ex: self-adhering, non-self-adhering, flexible, rigid, etc.
- Explain techniques for installation of in/outside corners, lap joints, mortar deflection devices, termination bars, sealants, etc...
- Discuss common risks and solutions for flashing installation, including compatibility and integration with other wall components

### Presenter Qualifications

York's team of passionate industry professionals will share their knowledge from their field experience and extensive training over the years.
