

York Flashings Stainless Steel Accessories LEED Product Letter

To whom it may concern:

All stainless steel accessories supplied by York Flashings utilize recycled or recyclable material. Our stainless steel originates from mills in the Eastern United States.

The average post-consumer recycle content of the 300 series stainless steel grades generally used in the building and construction market is approximately 75% to 85%.

Not only does 300 series stainless steel contain a high percentage of both post-consumer and post-industrial recycled content but at the end of its long, useful life in building applications it is 100% recyclable. Stainless building components can be repeatedly recycled back into similar products with no loss of quality.

Best Regards

Peter Belanger
