WEBINAR

**The Big Disconnect - The Importance of
Wall to Roof Connections for the Air Barrier**

March 2, 2022 @ 2 PM EST

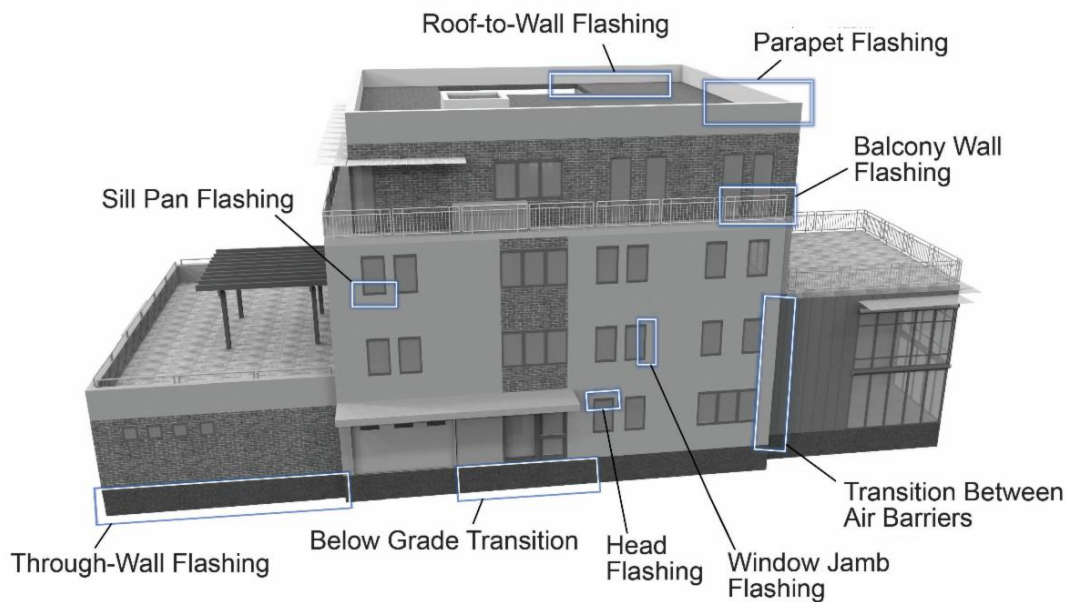

Join us for ABAA webinar on Wednesday, March 2nd, 2:00 pm. This webinar will review the importance of Wall to Roof Connections for the Air Barrier. Understand why the roof/wall air barrier intersection is critical to building performance. Roy Schaufele, owner of Division 7 Solutions, will be your host.

York 304 SA - Self-Adhering Stainless Steel Flashing

Solving the most complex transitions in the wall assembly

The stainless steel face provides a compatible surface for all neighboring materials and the butyl adhesive provides superior adhesion, outperforming traditional peel and stick.

Learn More about Domestically made Stainless Steel

There are many types of stainless steel, and the type used most in construction are 304 and 316 grades. With stainless steel imported worldwide, you need to protect your client and insist on U.S. quality expectations. You can specify that the stainless steel meets DFARS (Defense Federal Acquisition Regulation Supplement from the U.S. government), ensuring that even imported stainless steel meets U.S. quality standards.

DFARS documentation is done on a job by job basis and tracks the production roll numbers that prove that the product meets the DFARS requirements. DFARS is available upon request with tracking information and certification letter from the mill. The "Buy American Act" does not mean that the material meets any standards...It just means that they assembled your product in the U.S., so protect your client and ask for DFARS certification for your stainless steel meets DFARS standards.

Project Profile: Maple Elementary School

Maple Elementary School, located in Easthampton, MA, was a multi-million dollar project. York Flashings provided their **flexible stainless steel drainage plane flashing, Flash-Vent SS, to keep the weep vents from clogging and eliminate the need for mortar netting.**

Flash-Vent SS comes in multiple widths and

features a life-of-the-wall warranty, competitive costs, and ease of installation with local York Flashings support.

43 CommunityDrive
Sanford, ME 04073

T: 800-551-2828
yorkflashings.com

Specializing in transition membranes and through-wall flashing, York has been inventing and producing flashings since 1935. As the leader in commercial and residential flashing industry, York has led the charge to create flashings that are compatible with the air barriers and insulations that populate the cavity wall.
