

### Industry Article: Flashing It to the Right Height

#### A Tale of Proper Placement in Masonry Walls

Through-wall flashing (TWF) is required to extend up the backer wall at least 8", which has been the standard for many years in the masonry industry. However, in the last few decades, masonry cavity walls have become more crowded with air barriers, cavity drainage material, and continuous insulation. Here is a guide to follow for modern TWF installations.

yorkflashings.com

Specializing in transition membranes and through-wall flashing, York has been inventing and producing flashings since 1935. As the leader in commercial and residential flashing industry, York has led the charge to create flashings that are compatible with the air barriers and insulations that populate the cavity wall.
