

Industry Article: The Value of the Mockup Process

Bridging Design and Construction

The mockup process builds prototypes of key building elements to verify design intent, material compatibility, and installation methods before full construction. By identifying issues early, it enhances quality, reduces rework, and ensures long-term performance and compliance with project standards.

International Flashing Awareness Day Recap: The day reinforced the vital role flashing plays in protecting buildings

Highlights

August 26 marked a powerful day of learning and connection as the Air Barrier Association of America (ABAA) hosted a full schedule dedicated to the critical importance of proper flashing installation. Nearly 1,700 professionals joined five expert-led webinars, gaining practical strategies and technical knowledge to improve building performance and durability.

Key Insights & Takeaways

The FLASH ME Day movement is growing—training is now reaching trade schools, mason contractors, and regional workshops, building smarter, stronger teams far beyond the webinar screen. Below is a picture of multiple events our team offered around the country.
